Art Unit: 2829

1. In the previous office action mailed on 08/17/06, paragraph # 8 should include W) species in which claim 31 is drawn to.
2. Claims 32-33 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

It appears that the limitations of “means for storing a result of the testing...” as recited in claim 32 has no support in the original specification, therefore this feature is considered as a new matter.

3. Claims 1,4,10,12-14 and 32-33 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1, it is unclear how an integrated circuit is tested in order to obtain a testing result. It is unclear how the P-well bias and the N-well bias are interrelated and associated with the test result and the defect. Furthermore, It appears that the scope of the claim is incomplete since the step of independently modifying a P-well bias of an n-trnsistor (16) and an N-well bias (18) of a P-transistor (20) is not a testing step.

In claim 10, it is unclear how the voltage based testing is interrelated and associated with the modifying step and determining step in claim 1?

In claim 12, it is unclear which part of the circuit in which the low VDD is applied to.

In claim 32, it is unclear what “means for storing a result of the testing in a control unit” comprises of. Is it shown in any of drawings?

The dependent claims not specifically address share the same indefiniteness as they depend from rejected base claims.

4. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the feature of “means for storing a result of the testing in a control unit” as recited in claim 32 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as “amended.” If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either “Replacement Sheet” or “New Sheet”

pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

5. The search for the prior art has been performed. However, no relevant is found to meet the limitations of the instant claims 1,4,10,12-14 and 32-33
